FAST (from Millennium Computer Systems) is a web-based reporting tool that downloads data from the Banner financial system, stores it in the FAST database, and presents financial information in an easy-to-read and understandable format. You can use it to generate reports that present information in hundreds of different formats. This allows you to analyze and fully understand your financial data in order to make better decisions.

To get more information about FAST: after logging into FAST, go to the FAST online help by clicking on Click Here For HELP near the bottom of the Main Menu. You can also access the FAST User Manual from the same screen.
