## THE DEPARTMENT OF PSYCHOLOGY – ABOUT US

Come study with us! Together, the students, faculty, and staff of the Department of Psychology at the University of Manitoba have built an outstanding learning and research environment. As the first university founded in Western Canada, The University of Manitoba has served as the academic gateway to the Canadian West, and our Department of Psychology can serve as the gateway to your future. Graduate students may apply to, and receive training in, a wide variety of areas of specialization including Applied Behaviour Analysis, Brain and Cognitive Sciences, Clinical Psychology, Developmental Psychology, Quantitative Psychology, School Psychology, and Social and Personality Psychology. An apprenticeship-style training model is used so students have the flexibility to generate an individualized program of study based on their own specific research interests.

The Department, officially established in 1946, is today, the largest academic unit in the university with more than 35 professors and over 100 graduate students. We boast approximately 37,000 square feet of space for offices, laboratories, and classrooms. Basic research facilities are housed in over 100 dedicated research rooms. We host a large computer lab maintained by a crew of three excellent computer technicians, and integrated animal care facilities under the supervision of a dedicated animal care technician. These resources are augmented by collaborative relationships we have with other university departments, local hospitals, St. Amant Research Centre, and the Kleysen Institute for Advanced Medicine. As a graduate student, your research opportunities will be limited only by your imagination.

## THE UNIVERSITY OF MANITOBA – ABOUT THE UNIVERSITY

The University of Manitoba (UofM) is the province's largest, most comprehensive post-secondary educational institution. Founded in 1877, it was Western Canada's first university and remains one of its leading research-intensive schools. More than 26,000 students from all over the world currently study in a wide range of programs in the liberal arts and sciences, the creative arts, and the professions.

Research is a priority at the UofM and the success of its faculty in winning substantial research support in national competitions attests to this. The university currently has an allocation of 52 Canada Research Chairs, as well as the prestigious Canada 150 Research Chair and a Canada Excellence Research Chair laureate. The UofM has developed or partnered with [research centres](#), institutes, facilities and groups that believe in collaborative research and scholarship, and is involved with a number of strategic research initiatives, such as Mitacs and Research Manitoba. Within the past two decades, Smartpark was established with the assistance of provincial and national governments and is maturing as an environment where collaborations between university and industry enhance the commercialization of new technologies.

## GRADUATE STUDIES @ THE UNIVERSITY OF MANITOBA

More than 3,500 students from across Canada and around the world come to the University of Manitoba to pursue their academic dreams by studying at the graduate level with professors who are known nationally and internationally for their excellence in research and creative activities. Faculty members are awarded more than \$180 million annually to fund research which goes to supports ground-breaking research in a variety of disciplines including psychology, medicine, engineering, science, agriculture, and social science.

Graduate students are vital to making the University of Manitoba one of Canada's top research-intensive institutions. The dedicated administration and members of the Faculty of Graduate Studies oversee the academic quality and integrity of 135 graduate programs, including a number of highly innovative interdisciplinary programs, ensuring that students find both opportunity and success in their studies. The University of Manitoba has a long and impressive list of laurels. Please explore the Faculty of Graduate Studies web site to learn more about our accomplishments, as well as our personal and caring approach to an exceptional student-centred education. [umanitoba.ca/faculties/graduate\\_studies](http://umanitoba.ca/faculties/graduate_studies)

## STUDENT LIFE

A number of housing options are available to graduate students on campus and in the surrounding community. A full complement of services, including restaurants and pubs, book and computer stores, medical and dental offices, opticians, and florists, are available on campus as well as in the immediate neighbourhood. A variety of dining options are available nearby as well with on-campus ranging from sushi to pizza. Off campus dining possibilities are nearly limitless as Winnipeg's culturally-diverse population means that a great variety of ethnic cuisines are available throughout the city for every budget and occasion.

Winnipeg's cosmopolitan and multicultural character is exemplified by the diversity of its cultural institutions, festivals, and entertainment possibilities. Winnipeg is home to the world-renowned Royal Winnipeg Ballet, as well as to many professional opera, symphony, and theatre companies. Winnipeg hosts dozens of festivals and celebrations throughout the year including the Winnipeg International Children's Festival, the Jazz Winnipeg Festival, the Winnipeg Fringe Festival, the Winnipeg Folk Festival, the Festival de Voyageur, and Folklorama (the largest and longest-running multicultural celebration in the world). On Campus, the Black Hole Theatre Company entertains audiences annually with its eclectic selection of plays. A great number of concerts, and other social occasions are organized throughout the year by student organizations, faculties, and departments. For sports fans, professional city teams and the university's own Bisons combine to provide a wealth of exciting entertainment in hockey, football, baseball, basketball, volleyball, and soccer.

Recreational opportunities abound at the University, in Winnipeg, and in Manitoba. On campus, students can take advantage of outstanding athletic facilities including indoor running tracks, ice rink, swimming pool, weight training facilities, intramural and casual sports leagues, and personalized exercise programs designed to promote healthy living. Residents of Winnipeg can take advantage of a multitude of parks and trails affording exciting opportunities for walking, golf, jogging, biking, and skiing. Fort Whyte Nature Centre, although confined entirely within city limits, affords an opportunity to explore 600 acres of prairie, lakes, forest and wetlands. A short trip outside of Winnipeg reveals the geographical diversity of Manitoba, with leisure opportunities ranging from down-hill skiing to sunbathing on spectacular sand beaches.

## U of M - STUDENT LIFE

<http://umanitoba.ca/student-supports/get-involved>

## PROGRAMS OF STUDY

Students holding a B.A. (Honours) or B.Sc. (Honours) from the University of Manitoba or a four-year Honours B.A. or Honours B.Sc. from another Canadian university are normally eligible to be accepted into the M.A. program. Students holding a general or advanced B.A. or B.Sc. degree may be required to take a Pre-M.A. year before proceeding to the M.A. course work. All students entering the Pre-M.A. program should have taken the following courses: Eight half (3-credit hour) courses in psychology which include introductory psychology and research methods, and a second course in research methods or a course in statistics or computer science. Applicants for the PhD program should hold an M.A. or M.Sc. degree in psychology from the University of Manitoba or its equivalent from another university. Applicants at all levels must have at least a 3.0 grade point average (on a 4.5 grade point system) in their last 60 credit hours at a minimum, including hours in excess of the minimum taken during the same term.

### M.A. PROGRAM

Students holding an Honours degree in Psychology from a Canadian university (or its equivalent) may be accepted at the MA level. The following are the basic requirements for a thesis-based MA:

1. two half courses in the major from the Psychology graduate curriculum
2. an ancillary half course from either the Psychology graduate curriculum or from the senior (3000 level or above) curriculum in another Department
3. two half courses in psychological statistics (PSYC 7200, PSYC 7210)
4. timely completion of the MA Proposal Development course (PSYC 7780)
5. preparation and defense of the MA proposal
6. preparation and defense of the MA Thesis

Additional requirements may be specified by a student's Advisory Committee or by some programs (e.g. the Clinical Psychology Training Program).

Students who apply for admission to the MA program, but do not have an Honours degree, may be admitted at the Pre-MA

level. The particular courses taken during the pre-MA year are chosen by the Graduate Chair of the department so as to bring the student's educational background to a level comparable to that of an Honours student. Typically, a pre-MA program would be comprised of

1. Six hours of credit from both PSYC 3630 Psychological Measurement and Assessment and PSYC 3340 Design and Analysis for Psychological Experiments.
2. Three hours of credit from each of two of the five lettered Honours menu categories (biological psychology, cognitive psychology, developmental psychology, learning, and personality/social psychology). These courses will be chosen from content areas not included in the student's undergraduate curriculum.
3. Two half course electives in Psychology at the 4000 level or above.
4. Honours Research Seminar (PSYC 4520).

Successful completion of the pre-MA program does not guarantee admission to the MA program.

### PHD PROGRAM

A University of Manitoba M.A. degree (or its equivalent) is a prerequisite for admission to the PhD program.

The following are requirements for the PhD degree:

1. two half courses towards the major from the Psychology graduate curriculum
2. one ancillary half course from the Psychology graduate curriculum or from the senior (4000 level or above) curriculum in another Department
3. one half course in research design or analytic methods
4. completion of the Candidacy Examination
5. timely completion of the PhD Proposal Development course (PSYC 7790)
6. preparation and defense of the PhD proposal
7. preparation and defense of the PhD Dissertation

Additional requirements may be specified by a student's Advisory Committee or by some programs (e.g. the Clinical Psychology Training Program).

## APPLYING FOR ADMISSION

We hope that you will consider joining us here at the University of Manitoba. We have an energetic, productive, and caring department that will provide the support, education, and research opportunities you need to reach your goals. Once you settle on an area of specialization in which you would like to pursue graduate studies, it is often a good idea to contact a professor or two with whom you might like to work both to introduce yourself and to ask for more information about their interests and research. Clinical students can be admitted and advised by faculty members in any area of our department, including individuals with adjunct appointments to the Department of Psychology. Complete applications for admission to M.A. and PhD programs must be submitted to the **Faculty of Graduate Studies by December 15** of the academic year preceding admission. Applications are submitted online. A complete application should include all of the following:

1. A completed application for Graduate Admission and application fee. Apply on line using Self Service Centre  
[http://umanitoba.ca/faculties/graduate\\_studies/admissions/index.html](http://umanitoba.ca/faculties/graduate_studies/admissions/index.html)
2. Two completed Recommendation Forms from individuals familiar with the student's academic or professional work. The Self Service Centre system will use information provided by the applicant to generate an email to the recommender that contains a link to an online form within the Self Service Centre.
3. Transcripts are required from ALL recognized, post-secondary institutions attended, no matter whether a degree has been awarded or not. For initial assessment purposes only, **unofficial transcripts (uploaded to your UMGradConnect application) are acceptable and preferred**. Official transcripts will only be required by the Faculty of Graduate Studies if you are recommended for admission. To be considered official, transcripts must arrive in envelopes that have been sealed and endorsed (stamped across the back flap) by the Main Records Office of the issuing institution. In cases where the transcript does / will not clearly state that a degree has been conferred and when it was awarded, a copy of the final degree certificate is

required to accompany the transcript.

**Please note that official University of Manitoba transcripts are not required.** If you have access to your Aurora Student account, you may upload a web transcript. If not, an Admissions Assistant will add a copy of your transcript to your file for you.

4. **Statement of Intent Instructions**  
The statement of intent is a description of your academic and professional goals and your personal background. Tell us why you want to be an academic or professional psychologist and what you want to work on during your program of study.  
**Required** The statement should include your research interests (if applicable to your program) and how your background (educational and otherwise) has prepared you for this undertaking, as well as a preference ordering of academic staff members with whom you might wish to work (i.e., to have supervise your research), 2-3 pages maximum.  
**Optional** If you wish, you are invited to share as much or as little of your personal background as you feel appropriate within the given page limit. Your application will not be penalized if you choose not to disclose personal information, or for the content. Our program, consistent with the aims of our university and scientific and professional bodies, strives to include students of all backgrounds who reflect the diversity we see in society at large, and whose interest in psychology is informed by a wide range of experiences within and beyond formal academic training. If you choose to include personal information about your culture, race or ethnicity, religion, heritage, nationality, language, sexual orientation, physical and psychological functioning, gender, age, first-generation student and/or socio-economic status, it will be considered as additional context you have supplied for our understanding of your academic and professional achievements and goals.
5. Any additional information such as special awards, abilities, and publications.
6. An English Language Proficiency Test (ELPT) score is required of all applicants unless they have received a high school diploma or university degree from Canada or one of the countries listed on the

ELPT Exemption List. (*See International Student - Admission Requirements* ([http://umanitoba.ca/faculties/graduate\\_studies/admissions/139.html](http://umanitoba.ca/faculties/graduate_studies/admissions/139.html)) for exempt countries and minimum score requirements)

## FINANCIAL SUPPORT

Psychology faculty and students have been extremely successful in attracting research funding from national granting agencies. This support is supplemented by generous funding from the province of Manitoba, and from the University of Manitoba itself. Thus, both through research funding as well as via work as teaching assistants, the majority of our graduate students receive significant funding. Students accepted into the graduate program at the MA level with a GPA higher than 3.75/4.5 currently receive up to two years of base funding from the Psychology Graduate Fellowship at \$15,000/year. Students are not required to apply for a PGF. The award is comprised of departmental funding and dependent on budgetary constraints. International Students are eligible for a PGF. Students entering a Pre-Master's year are not eligible. Students accepted into the graduate program at the PhD level are also automatically considered for a Psychology Graduate Fellowship, currently valued at \$15,000/year for the first year.

Students who are applying for admission to the Psychology Graduate Program at the Masters level are not required to submit a separate application for a University of Manitoba Graduate Fellowship (UMGF). Students will automatically be considered for the UMGF award. Students applying at the PhD level must include pages seven through nine of the UMGF application found at Psychology [Graduate Student Resources](#).

Competitions for various awards and fellowships are held throughout the academic year (please see the Faculty of Graduate Studies web site for a complete list - [umanitoba.ca/faculties/graduate\\_studies/funding](http://umanitoba.ca/faculties/graduate_studies/funding) ). Psychology graduate students receive frequent email updates regarding upcoming competitions and application deadlines.

## PROGRAM COSTS

Tuition and ancillary fees for full-time, part-time, and occasional graduate students are set by the University of Manitoba. For current information please visit <http://umanitoba.ca/registrar/tuition-fees>

## A. Cost Offsetting Benefits:

- a) Financial Aid: International Graduate Student Bursary ([IGSB](#)): Awarding of this bursary is based on grade point average and verification of need. It will help to provide financial aid in subsequent years when full tuition fee is required, and is administered by the Financial Aid and Awards Office.
- b) Grants: Students may receive a grant stipend from their academic advisor if funds are available.
- c) Loans: Students may apply for student loans but these loans are not financed through the University.
- d) Tuition Remission: International Graduate Student Entrance Scholarship ([IGSES](#)). International students entering their first year of full-time graduate studies in pursuit of a Master's or Graduate Diploma may be eligible for this scholarship. Academic qualification for this scholarship is a grade point average (GPA) of 3.5 in the previous two years of study. FGS will calculate your GPA during the admission process, and determine your eligibility, so there is no need to apply for this scholarship.
- e) Assistantships: Students may apply/inquire for Research Assistantships (current salary range \$11.08-\$23.00 per hour, subject to available funding); Teaching Assistantships (currently \$21.09 to \$23.11 per hour); and Grader/Marker (currently \$15.56 per hour) positions.

## B. Fellowships/Scholarships:

The following awards are among those available to Canadian citizens, permanent residents, or International Students:

- a) Canadian Institute of Health Research ([www.cihr.ca](http://www.cihr.ca))
- b) Research Manitoba (<https://researchmanitoba.ca/>). International Students are eligible to apply.
- c) Natural Sciences and Engineering Research Council of Canada Scholarships ([www.nserc-crsng.gc.ca](http://www.nserc-crsng.gc.ca))
- d) Social Sciences and Humanities Research Council of Canada Scholarships ([www.sshrc-crsh.gc.ca](http://www.sshrc-crsh.gc.ca))

- e) The University of Manitoba Fellowships (UMGF). Newly admitted MA students are not required to apply to the UMGF as they are automatically considered for the award. International Students are eligible for a UMGF. Students entering a Pre-Master's year are not eligible to apply for funding.
- f) Psychology Graduate Fellowship: (PGF): Students are not required to apply for a PGF. The award is comprised of departmental funding. International Students are eligible for a PGF. Students entering a Pre-Master's year are not eligible.
- g) International Graduate Student Entrance Scholarship: International students entering their first year of full-time graduate studies in pursuit of a Master's may be eligible for this scholarship. Academic qualification for this

scholarship is a grade point average (GPA) of 3.5 in the previous two years of study. FGS will calculate your GPA during the admission process, and determine your eligibility, so there is no need to apply for this scholarship.

- h) The Commonwealth Scholarship and Fellowship Plan provide awards for study in Canada to citizens of Commonwealth countries who hold a Bachelor's or Master's degree. Interested students should contact the appropriate agency in their home country.

**Additional information regarding student funding is available at the University of Manitoba website:**

[Funding, Awards and Financial Aid](#)

## AREAS OF SPECIALIZATION

---

### APPLIED BEHAVIOUR ANALYSIS

Applied Behaviour Analysis (ABA) involves the systematic application of learning principles and techniques to assess and improve individuals' private and public behaviours in order to help them function more fully in society. Training in the experimental analysis of behaviour (basic research on behaviour) is also provided. The Department of Psychology offers research and applied training at both the MA and PhD levels in ABA. Students have the opportunity to receive supervised training in the practice of ABA with varied clientele, and especially with persons with developmental disabilities and/or autism.

We offer a course sequence that has been verified by the Association for Behavior Analysis International. Please refer to Appendix 1 for further information.

---

#### AREA FACULTY

**RASHA BARUNI**, PHD, UNIVERSITY OF SOUTH FLORIDA

204 474 9258

[Rasha.Baruni@umanitoba.ca](mailto:Rasha.Baruni@umanitoba.ca)

**AREAS OF EXPERTISE:** Behavioral Skills Training, Safety Skills, Assessment and Treatment of Maladaptive Behaviors, Neurodevelopmental Disorders, and Autism Spectrum Disorder

**CURRENT RESEARCH INTERESTS:** Rasha Baruni, PhD, is an Assistant Professor in the Department of Psychology. She obtained her PhD in applied behavior analysis from the University of South Florida and her MS degree in applied behavior analysis from St. Cloud State University. She has over 15 years of experience providing behavior analytic services to young children and adolescents with autism spectrum disorder in homes, schools, and clinics within Canada, the US, and the UAE. Her research interests include training practitioners to implement evidence-based practices in safety skills, teaching children safety skills, assessment and treatment of maladaptive

behaviors, and investigating conjugate schedules of reinforcement. I will consider admitting students in the next academic year.

**JENNIFER COOK**, PHD, UNIVERSITY OF SOUTH FLORIDA

204 474 7422

[Jennifer.Cook@umanitoba.ca](mailto:Jennifer.Cook@umanitoba.ca)

**AREAS OF EXPERTISE:** Neurodevelopmental Disorders, Autism Spectrum Disorder, Early Behavioral Intervention, and Health, Sport, & Fitness (general)

**CURRENT RESEARCH INTERESTS:** Automatic Reinforcement, Schedules of Reinforcement, Cooperative Responding, Increasing Activity, and Improving Athletic Form. I will consider admitting a student for the next academic year.

**GARRY L. MARTIN, DISTINGUISHED  
PROFESSOR EMERITUS**, PHD, ARIZONA STATE  
UNIVERSITY

204 474 8589

[Garry.Martin@umanitoba.ca](mailto:Garry.Martin@umanitoba.ca)

**AREAS OF EXPERTISE:** Developmental Disabilities, Autism Spectrum Disorders, Sport Psychology

**INFORMATION ABOUT ME:** After growing up on a farm near Neepawa, MB, I attended Colorado College on a hockey scholarship, where I received a BA degree. After receiving my MA and PhD degrees in Psychology from Arizona State University, I began teaching at the University of Manitoba, where I am now a Distinguished Professor Emeritus. My applied consulting activities and my research have been largely devoted to autism, developmental disabilities, and sport psychology. I have co-authored or co-edited 8 books and over 170 journal articles on various areas in behavioral psychology. I have served as staff training and programming consultant to numerous training facilities for persons with developmental disabilities and/or autism in several provinces in Canada, several states in the USA, and in Brazil and Peru. I have also served as a sport psychology consultant for several sport teams and numerous athletes in several sports. I am now completely retired from U of M

activities, and I look forward to enjoying the ageing process.

**TOBY MARTIN**, PHD, UNIVERSITY OF MANITOBA

204 474 8169

[Toby.Martin@umanitoba.ca](mailto:Toby.Martin@umanitoba.ca)

**AREAS OF EXPERTISE:** Experimental and applied behaviour analysis, developmental disabilities, challenging behaviour, discrimination training

**CURRENT RESEARCH INTERESTS:** Knowledge translation including parent and staff training, behavioural approaches to promoting mindful caregiving, program evaluation. I am not accepting graduate students at this time.

**C.T. YU, PROFESSOR EMERITUS**, PHD, UNIVERSITY OF MANITOBA

204 474 9453

[CT.Yu@umanitoba.ca](mailto:CT.Yu@umanitoba.ca)

**AREAS OF EXPERTISE:** Developmental disabilities and autism spectrum disorders

**CURRENT RESEARCH INTERESTS:** Applied behaviour analysis especially in the areas of behavioural assessment and training, staff stress and burnout, and knowledge translation

## BRAIN & COGNITIVE SCIENCES

Graduate study in this area offers students a unique opportunity for research training in both neuroscience and cognitive psychology. The Department boasts a number of faculty members who investigate human psychology from a biological perspective, providing students with opportunities to investigate the physiological processes underlying learning, memory, neurological impairments, visual perception, and visuomotor control. The Department's neuroscientists offer training in neuropsychology, developmental neuroscience, neurotoxicology, and fMRI, collaborating with members of the [Core Neuroimaging Platform Lab](#). This area also hosts several specialists in the experimental study of human mental processes. The Department's cognitive scientists provide expertise in the domains of language processes, visual and auditory perception and selective attention, and memory. Faculty in the Brain and Cognitive Science area receive funding from a variety of sources, resulting in cutting-edge laboratories utilizing modern and diverse techniques. During both M.A. and PhD training, students will develop their ability to think critically and work independently, while still being able to successfully collaborate and work as part of a team. The course requirements in this area are structured around a flexible core curriculum that permits specialization and concentration of research during graduate training. Students will also be given the opportunity to collaborate with faculty from other areas in Psychology, and in related social, behavioural, and biomedical sciences.

---

### AREA FACULTY

**NICK BROSOWSKY**, PHD, CITY UNIVERSITY OF NEW YORK

204 474 9739

[Nicholaus.Brosowsky@umanitoba.ca](mailto:Nicholaus.Brosowsky@umanitoba.ca)

**AREAS OF EXPERTISE:** Attention, Cognitive Control, Mind Wandering, Creativity, Multi-Tasking, Music Cognition, Skill-Learning

**CURRENT RESEARCH INTERESTS:** The central goal of my current research program is to understand how people

manage attentional demands in dynamic environments. Everyday activities can vary wildly in terms of attentional control demands (e.g., studying in a library, playing hockey, driving on a four-lane highway) and distractions can come in many forms (e.g., environmental, self-generated, habits). Managing these demands requires a complex set of processes to monitor and compare ongoing actions with internal goals and flexibly update behavior to meet those changing demands. My research investigates the underlying mechanisms that allow people to adaptively regulate attentional control. However, the success—and failure—to adaptively regulate control has far-reaching implications. Poor control regulation can result in momentary cognitive errors (e.g., not paying attention to where you put your keys because you were mind wandering), persistent errors (e.g., an inability to focus while trying to work from home), and extreme perseverative behavior (e.g., ruminative thoughts, attention disorders). Another aim of my research is to investigate the consequences of control regulation in a variety of domains such as creativity, multi-tasking, music cognition, and skill-learning. I will consider admitting a student for the next academic year.

**DAWSON CLARY**, PHD, UNIVERSITY OF MANITOBA

204 474 6627

[Dawson.Clary@umanitoba.ca](mailto:Dawson.Clary@umanitoba.ca)

**AREAS OF EXPERTISE:** Comparative Cognition, Evolution of Cognition  
Corvid Cognition, Social Cognition, Self-awareness, Mirror Self-Recognition

**CURRENT RESEARCH INTERESTS:** Broadly, I am interested in the cognitive abilities of non-human animals and the ecological factors that influence the evolution of cognition. More specifically, my research investigates whether living in large social groups influences the social cognitive skills of birds in the corvid family. To do so, I compare social-living species (Western scrub jays, pinyon jays) with more solitary species (Clark's nutcrackers) to determine whether they differ in the strategies they use to prevent their food from being stolen by other birds, as an indicator of what they appreciate about the intentions and perspectives of other individuals. In a related line of research, I also investigate whether corvids can recognize themselves in the mirror and

whether this understanding of 'self' is a necessary precursor for complex social cognitive abilities.

**STEVEN GREENING**, PHD, UNIVERSITY OF WESTERN ONTARIO

204 474 8259

[Steven.Greening@umanitoba.ca](mailto:Steven.Greening@umanitoba.ca)

**AREAS OF EXPERTISE:** Emotion; Emotion Regulation; Cognitive Neuroscience; Facial Affect Perception; Mental Imagery; Depression and Anxiety; Aging; fMRI; Psychophysiology

**CURRENT RESEARCH INTERESTS:** Emotions serve to guide our thoughts and actions in an adaptive fashion, but sometimes they can become excessive, inappropriate, and even pathological, as in the case of major depression or post-traumatic stress disorder. Thankfully, there is both neurobiological and cognitive flexibility in how the impact of emotions is regulated. The primary goal of my research program is to elucidate the neurocognitive mechanisms involved in adapting to and controlling the influence of emotional events across the lifespan; and secondarily to assess how these mechanisms contribute to the development and persistence of psychopathology. My current research is focused on determining how internally directed (e.g., mental imagery) versus external directed processes (e.g., object-based attention) interact with emotion to influence information processing within brain networks. To accomplish this, I combine multiple methods from cognitive neuroscience (e.g., fMRI, MVPA & DTI) and psychology (e.g., psychophysiology & behavior) in studies of healthy participants ranging in age from youth to older adulthood and those with psychopathology. I will consider admitting a student for the next academic year.

**TAMMY L. IVANCO**, PHD, MCMASTER UNIVERSITY

204 474 7375

[Tammy.Ivanco@umanitoba.ca](mailto:Tammy.Ivanco@umanitoba.ca)  
[home.cc.umanitoba.ca/~ivancotl](http://home.cc.umanitoba.ca/~ivancotl)

**AREAS OF EXPERTISE:** Brain Plasticity, Learning and Memory, Developmental Disorders, Brain Injury

**CURRENT RESEARCH INTERESTS:** My lab is investigating one of the most interesting questions in neuroscience – "How does the brain learn and retain information for use

throughout the lifetime?" We study what occurs during learning when the brain is working normally, but we are also interested in what happens when a brain is compromised or damaged. Some of the research we are doing is aimed at investigating developmental disorders and neurological disorders that affect young and old brains, such as those that result from stroke or traumatic brain injury. My lab utilizes a number of techniques to investigate plasticity throughout the mammalian lifetime. These techniques come from the areas of behavioural neuroscience, molecular biology and neuroscience, electrophysiology, and quantitative and qualitative anatomy.

**LORNA JAKOBSON**, PHD, UNIVERSITY OF WESTERN ONTARIO

204 474 6980

[Lorna.Jakobson@umanitoba.ca](mailto:Lorna.Jakobson@umanitoba.ca)

**AREAS OF EXPERTISE:** Human Neuropsychology; Visual Neuroscience, Visuomotor Control; Neurodevelopmental Disability; Neuropsychology of Music

**CURRENT RESEARCH INTERESTS:** The research in my lab exemplifies four important current trends. First, we study transfer effects in expert systems. For example, our research has provided evidence that extensive music training is linked to improved functioning in a range of non-musical domains including executive functioning, memory, reading ability and speech perception, and drawing. Second, we do research charting the typical and atypical development of the brain. Our primary focus in this work has been to explore how atypical neurodevelopment associated with extremely premature birth or autism spectrum disorder impacts the development of a range of perceptual, cognitive, and social skills. Third, we have a line research exploring how information about movement affects how we direct our attention, make perceptual judgments, and represent information in memory. Finally, we have developed a line of research exploring how individual differences in sensory processing styles and in certain personality traits (sensory processing sensitivity, alexithymia) relate to emotion processing and regulation and to aspects of empathy and compassion. I am not considering accepting a new graduate student for the next academic year.

**RANDALL K. JAMIESON**, PHD, QUEEN'S UNIVERSITY

204 474 7837

[Randy.Jamieson@umanitoba.ca](mailto:Randy.Jamieson@umanitoba.ca)

[home.cc.umanitoba.ca/~jamiesor](http://home.cc.umanitoba.ca/~jamiesor)

**AREAS OF EXPERTISE:** Learning, memory, and knowledge; Computational modelling; Cognitive Science

**CURRENT RESEARCH INTERESTS:** I conduct computational and experimental studies of how people learn, remember, think, and know. I am particularly interested in the problems of implicit learning, associative learning, and knowledge representation. My theoretical goal is to develop a coherent and general account of learning and memory. My applied goal is to leverage those theoretical discoveries to develop cognitive technologies.

**DEBBIE KELLY**, PHD, UNIVERSITY OF ALBERTA

204 474 9489

[Debbie.Kelly@umanitoba.ca](mailto:Debbie.Kelly@umanitoba.ca)

**AREAS OF EXPERTISE:** Comparative Cognition, Spatial Cognition, Social Cognition, Functional Lateralization, Aging, Corvid Cognition, Avian Cognition, Dog Cognition, Cognitive Ecology and the Evolution of Cognition

**CURRENT RESEARCH INTERESTS:** My research team examines spatial memory, social cognition, brain lateralization, aging and the evolution of cognition using a comparative approach. Not only are we interested comparing the cognitive abilities of human and non-human animals (a psychological approach), we also examine cognition across related species to understand the evolution of cognitive traits (a biological approach). Using these approaches, we have examined whether sociality influences whether one species of corvid can recognize members of its own species, as well as members of another species, as a potential threat to its hidden food stores. For these studies we have used Clark's nutcrackers, pinyon jays and Western scrub jays. We have investigated whether racing pigeons might be good models to understand age-related brain changes. Using immersive virtual reality, we have examined how human spatial memory changes with healthy aging and with Alzheimer's disease. Recently, we have also begun to study the cognitive abilities of the domesticated dog.

**JASON LEBOE-MCGOWAN**, PHD, MCMASTER UNIVERSITY

204 272 1558

[Jason.Leboe-McGowan@umanitoba.ca](mailto:Jason.Leboe-McGowan@umanitoba.ca)

**AREAS OF EXPERTISE:** Mechanisms Underlying Subjective Experience; Contributions of Subjective Experience to Performance in Memory, Perception, and Selective Attention Tasks; Benefits and Costs of Prior Learning

**CURRENT RESEARCH INTERESTS:** People often assume near-perfect accuracy in the way they experience the world. However, considerable evidence suggests that this assumption is often incorrect. People's perception of the external world can be distorted. Also, errors can occur in what people believe about their own personal history. The focus of my research is to investigate the rules that govern errors people make in both perceptual and remembering tasks. I expect that the same principles that lead people into error are also the principles that allow them to be highly accurate in their perception of the current environment and in their recollections of the past. Thus, by determining the basis for such discrepancies between reality and subjective experience, I expect to gain a greater understanding of the principles that govern human cognition more generally. I am also interested in investigating how people's ability to perform a task in the present is influenced by prior learning. In many cases, performing a similar task in the past leads to better performance on that task. In other situations, however, prior learning can actually interfere with current performance on a task. Knowledge of the principles that determine whether the outcome of a learning experience will be positive or negative could provide insight into the conditions that best promote the acquisition of skill.  
I will consider offering admission for the next academic year.

**LAUNA LEBOE-McGOWAN**, PHD, UNIVERSITY OF MANITOBA

204 474 7326

[Launa.Leboe-McGowan@umanitoba.ca](mailto:Launa.Leboe-McGowan@umanitoba.ca)

**AREAS OF EXPERTISE:** Constructive Nature of Auditory and Visual Perception; Time perception; Heuristics

**CURRENT RESEARCH INTERESTS:** Cognitive illusions have provided an essential basis for understanding cognitive processes across a range of contexts. Such sources of error in the performance of cognitive tasks have been fundamental in instructing researchers about mechanisms underlying low-level perceptual experience, remembering, and judgment and decision-making. Essential for illuminating inefficiencies in human cognitive abilities, this research has also provided clues about basic cognitive mechanisms. One important outcome of adopting a research focus that emphasizes cognitive illusions is that human cognitive processing does not directly make contact with either the sensory environment or representations of prior experience. Instead, at least in part, all aspects of cognitive processing reflect an imperfect construction of reality. My research balances the more typical emphasis on bottom-up processes of perception by providing an investigation of top-down sources of error in perception of auditory and visual events. Because my goal is to obtain novel insights into fundamental cognitive processes, the knowledge gained from my research program will have broad applicability across a diversity of fields. For example, in contexts for which the difference between life and death depends on responding effectively to rapidly changing circumstances, impairments of perception threaten human safety in domains ranging from air travel to emergency medicine.

**JONATHAN J. MAROTTA**, PHD, UNIVERSITY OF WESTERN ONTARIO

204 474 7057

[Jonathan.Marotta@umanitoba.ca](mailto:Jonathan.Marotta@umanitoba.ca)

[www.perceptionandaction.com](http://www.perceptionandaction.com)

**AREAS OF EXPERTISE:** Visuomotor Control; Eye-hand Coordination; Face and Object Perception; fMRI; Cognitive Neuroscience, Neuropsychology; Stroke; Aging

**CURRENT RESEARCH INTERESTS:** While it has been said that the biological purpose of the brain is to generate behaviour, one must remember that almost half of the cerebral cortex is devoted to vision-related functions. It follows then that neural processes that transform visual information into the representations needed to perceive the world and interact within it, are central to brain

function. My research focuses on answering one of the fundamental questions in Cognitive Neuroscience – how sensory information is transformed into perceptions of the world and useful motor acts. By investigating these processes in neurological patients and intact subjects, my research has contributed to a better understanding of the functional architecture of visual perception and the visual control of action. Insights from this research will help in the development of sophisticated diagnostic tools and more theoretically-motivated approaches to the rehabilitation of patients. This research will also assist in the development of more efficient control systems for robotic-assistance devices for the impaired and may ultimately lead to neuroprosthetic devices capable of making the crippled walk and the blind see.

I will consider offering admission for the next Academic year.

**MURRAY SINGER, PROFESSOR EMERITUS**,

PHD, CARNEGIE-MELLON UNIVERSITY

204 474 8486

[Murray.Singer@umanitoba.ca](mailto:Murray.Singer@umanitoba.ca)

**AREAS OF EXPERTISE:** Cognitive Processes of Natural Language Comprehension; Inferences in Language Comprehension; Memory for Text and Discourse; Question Answering; Individual Differences in Comprehension; Basic Memory Processes; Computational Modelling of Language Processes

**CURRENT RESEARCH INTERESTS:** In my laboratory, we ask how people understand ordinary written and spoken messages. To approach this goal, particular emphasis is placed on how people infer the many ideas that were intended by the author or speaker but not directly stated; and how people successfully retrieve information after comprehending a message. The research encompasses many branches of study. For example, we ask how people's comprehension is influenced by individual differences in their cognitive capacity, reading skill, and knowledge. We scrutinize different text genres, ranging from folktales to science texts. Each of these problems further reveals the character of language comprehension. Some of this work has resulted in the investigation of basic memory processes, including memory strength, distinctiveness, metamemory, and signal detection analyses of memory judgments. The experimental studies are conducted in computer controlled laboratories using

sophisticated software. Computational models are used as a tool to develop and assess theoretical analyses of the phenomena. I'll consider accepting a student for Master's study next fall or someone with a Master's degree enrolling at the Ph.D. level.

## CLINICAL PSYCHOLOGY

Training in clinical psychology began at the University of Manitoba in 1967 with only two faculty members and grew very rapidly into what is now the Clinical Psychology Training Program. A training clinic, the Psychological Service Centre (PSC), was established in 1968. The Program achieved accreditation by the American Psychological Association in 1972, which it maintained until voluntarily withdrawing from APA accreditation January 1, 2012. The program has maintained accreditation by the Canadian Psychological Association since 1988 and currently has a 6-year term until 2028-2029.

The Clinical Psychology Training Program follows the doctoral level, scientist-practitioner model. We believe this model lends itself most readily to the training of clinical psychologists prepared to meet the ever-changing needs of clinical service, research, education, and administration. Therefore, students are given a solid grounding in both the science of psychology and clinical practice. There is an early and continuous integration of science with service, theory with practice, and research training with clinical training. Graduates are competent to apply psychological theories in conceptualizing individual and interpersonal problems and to develop effective interventions. They evaluate their professional activities via acceptable scientific procedures. In addition, graduates are expected to adhere rigorously to ethical and professional standards in providing psychological services. They accept responsibility for teaching others, for reporting their views and findings to colleagues, and for making creative contributions to their chosen specialty areas within clinical psychology. Finally, graduates possess the talents, values, and commitment to play significant roles in the amelioration of contemporary social problems.

Please refer to **Appendix 2** for further information about the clinical program, including admissions to the program, the clinical training sequence and curriculum, and data on student admissions and outcomes

.....

## AREA FACULTY

**DIANE HIEBERT-MURPHY, PHD, UNIVERSITY OF MANITOBA**

204 474 8283

[Diane.Hiebert-Murphy@umanitoba.ca](mailto:Diane.Hiebert-Murphy@umanitoba.ca)

**AREAS OF EXPERTISE:** Intimate Partner Violence, Family-Centered Practice, Family Therapy

**CURRENT RESEARCH INTERESTS:** I am interested in how families adapt to challenging situations and how intervention can support families in these circumstances. The majority of my work has addressed these issues within two specific contexts: families who have experienced violence and families with young children with special needs. My current research is focused on intimate partner violence. I have projects looking at the experiences of women who are considered “at risk” for partner violence and women who are frequent users of shelter services. I am also examining how power is defined and experienced in couples with a history of violence. This research is being conducted within the Couples Project, a clinical service/training/research program that I run for couples who have experienced violence and are working towards an abuse-free relationship. I am not considering admitting a new student for the next academic year.

**LORNA JAKOBSON, PHD, UNIVERSITY OF WESTERN ONTARIO**

204 474 6980

[Lorna.Jakobson@umanitoba.ca](mailto:Lorna.Jakobson@umanitoba.ca)

**AREAS OF EXPERTISE:** Human Neuropsychology; Visual Neuroscience, Visuomotor Control; Neurodevelopmental Disability; Neuropsychology of Music

**CURRENT RESEARCH INTERESTS:** The research in my lab exemplifies four important current trends. First, we study transfer effects in expert systems. For example, our research has provided evidence that extensive music training is linked to improved functioning in a range of non-musical domains including executive functioning, memory, reading ability and speech perception, and drawing. Second, we do research charting the typical and atypical development of the brain. Our primary focus in this work

has been to explore how atypical neurodevelopment associated with extremely premature birth or autism spectrum disorder impacts the development of a range of perceptual, cognitive, and social skills. Third, we have a line research exploring how information about movement affects how we direct our attention, make perceptual judgments, and represent information in memory. Finally, we have developed a line of research exploring how individual differences in sensory processing styles and in certain personality traits (sensory processing sensitivity, alexithymia) relate to emotion processing and regulation and to aspects of empathy and compassion.

I am not considering accepting a new graduate student for the next academic year.

**EDWARD JOHNSON**, PHD, UNIVERSITY OF WATERLOO  
204 474 9006

[Ed.Johnson@umanitoba.ca](mailto:Ed.Johnson@umanitoba.ca)

**AREAS OF EXPERTISE:** Ego-threat, Self-compassion, Clinical Supervision, Psychotherapy

**CURRENT RESEARCH INTERESTS:** My research addresses how mental health and self-regulation are negatively affected by ego-threats, such as feelings of shame and self-criticism, or trauma, and positively influenced by interventions that promote self-acceptance, such as psychotherapy and self-compassion. Other scholarly interests are in how psychotherapists and clinical supervisors develop competence. I am not considering accepting a new student for the next academic year.

**COREY S. MACKENZIE**, PHD, QUEEN'S UNIVERSITY

204 474 8260

[Corey.Mackenzie@umanitoba.ca](mailto:Corey.Mackenzie@umanitoba.ca)  
<http://www.coreymackenzie.com>

**AREAS OF EXPERTISE:** Geropsychology, geriatric psychiatric epidemiology, mental health service utilization, caregiver stress, mindfulness, stigma.

**CURRENT RESEARCH INTERESTS:** My (he/him/his) Aging and Mental Health laboratory is interested in improving older adults' mental health using both quantitative and qualitative research methods, and secondary analyses of national population surveys. Within the broad field of geriatric mental health my students, local, national, and international collaborators and I are engaged in research

related to three topics. First, we are interested in understanding positive (e.g., resilience) and negative (e.g., mood and anxiety disorders) changes in mental health with age. Second, because older adults are the least likely group to seek professional help when they have mental health problems, we explore barriers to their use of mental health services. Finally, we are investigating the mental health and cognitive consequences of stress experienced by caregivers of older adults with dementia.

I am not considering accepting a new student in the next Academic year.

**ALICIA NIJDAM-JONES**, PHD, FORDHAM UNIVERSITY  
204 474 6579

[Alicia.Nijdam-Jones@umanitoba.ca](mailto:Alicia.Nijdam-Jones@umanitoba.ca)

**AREAS OF EXPERTISE:** Forensic Psychology, Cross-Cultural Assessment, Psychological Assessment and Diagnosis, Cognitive Behavioural Therapy

**CURRENT RESEARCH INTERESTS:** Dr. Alicia Nijdam-Jones' (she/her) research program uses quantitative and qualitative approaches to examine cross-cultural issues in psychological assessment and forensic mental health services. She specializes in violence risk assessment, malingering assessment, stalking, and the use of forensic assessment measures with linguistically, ethnically, and culturally diverse samples. Her current projects examine the cultural sensitivity and cross-cultural validity of violence risk and malingering assessment tools in Mexico City. She is also co-director and provincial lead on a national SSHRC partnership development grant examining cultural safety for Indigenous peoples involved with forensic mental health services. She will be accepting a new student in the next academic year.

**KRISTIN REYNOLDS**, PHD, UNIVERSITY OF MANITOBA

204 474 9528

[Kristin.Reynolds@umanitoba.ca](mailto:Kristin.Reynolds@umanitoba.ca)

**AREAS OF EXPERTISE:** Knowledge Translation, Mental Health Literacy, Mental Health Service Use, Community Mental Health, Geriatric Psychology, Perinatal Mental Health, Health Psychology

**CURRENT RESEARCH INTERESTS:** My Health Information Exchange Laboratory is interested in decreasing gaps in the translation of health-related knowledge to the public, and increasing access to health-related information and

services. Within the area of health-related knowledge translation (KT), I have three lines of research: pathways to health care treatment; evaluation of health-related information; and exploration of needs of community groups. My lab uses a wide range of research methodologies to examine research questions in the area of health-related KT, including primary quantitative data collection and analysis, secondary data analysis of population databases, qualitative data collection and analysis, and unique website and application evaluation methodology. I am considering accepting a clinical psychology graduate student for the next academic year.

**LESLIE E. ROOS**, PHD, UNIVERSITY OF OREGON

204 474 8746

[Leslie.Roos@umanitoba.ca](mailto:Leslie.Roos@umanitoba.ca)

<https://heartsandmindslab.com/>

**AREAS OF EXPERTISE:** Maternal-Child Health, Supportive Parenting, Stress Neurobiology, Early Intervention & Prevention, Developmental Psychopathology, Cognitive & Emotional Development, Pediatrics, Self-Regulation, Behavior Management, Dialectical Behavior Therapy, Developmental Origins of Health and Disease

**CURRENT RESEARCH INTERESTS:** Dr. Roos' research focuses on addressing the mental health needs of families of young children exposed to chronic stress. This includes designing programs to address specific parent and child needs as well as refining programs to improve efficacy. She also researches cognitive, emotional, and physiological self-regulatory processes that are amenable to change to gain a more precise understanding of what works for whom. Dr. Roos is also committed to community-led partnerships to promote family well-being and works with a parent advisory board on clinical research projects. In her basic science work, Dr. Roos employs multi-level assessments of child and caregiver biobehavioural function. Techniques used include EEG, Executive function, Video-Coding, Autonomic Physiology, Hormonal, and Biomarker measurements. She is also interested in the development of ecologically valid assessments of acute stress to better understand how caregivers help children cope with challenging experiences. Dr. Roos is affiliated with the Children's Health Research Institute of Manitoba and is a Junior Fellow at the Center on the Developing Child at Harvard

University. She will be accepting Graduate Students in the Clinical Psychology & School Psychology Programs for the next academic year.

**GABRIEL SCHNERCH**, PHD, UNIVERSITY OF MANITOBA

204 474 6945

[Gabriel.Schnerch@umanitoba.ca](mailto:Gabriel.Schnerch@umanitoba.ca)

**AREAS OF SPECIALTY:** Neurodiversity; ADHD; autism; psychoeducational assessments; ethics in professional psychology; dialectical behaviour therapy (DBT); applied behaviour analysis (ABA)

**CURRENT RESEARCH INTERESTS:**

Intersectionality of neurodivergent (e.g., autistic) and trans experiences; ethical issues in applied behaviour analysis (ABA) and positive behaviour support (PBS); autistic-prioritized outcomes in therapy; operant learning relating to infant and early childhood development.

Please note that I am not able to admit graduate students to the Clinical or School Psychology Training Programs as I am in an Instructor appointment. However, I may be available to supervise honours student(s).

**JENNIFER THEULE**, PHD, UNIVERSITY OF TORONTO

204 474 7417

[Jen.Theule@umanitoba.ca](mailto:Jen.Theule@umanitoba.ca)

Lab website: [fdpl.ca](http://fdpl.ca)

**AREAS OF EXPERTISE:** Family Systems; Parenting; Attention Deficit Hyperactivity Disorder, Women's Issues in Applied Psychology, Meta-Analysis

**CURRENT RESEARCH INTERESTS:** The overarching theme of my research is that families are systems and family members have a variety of effects on one another. I currently have two areas of interest falling under this umbrella. The first is on the family (including parental) factors associated with child Attention Deficit Hyperactivity Disorder. The second is on clinical applications of attachment theory, as well as parenting more generally. Additionally, I have an interest in women's issues in applied psychology. I often use systematic reviews (including meta-analysis) to help me answer these questions and clarify the effects and relationships between these factors, as well as to identify

moderators of the examined relationships. I anticipate accepting one to two graduate students in the School and/or Clinical Psychology program for admission to the next academic year.

**HAROLD WALLBRIDGE**, PHD, UNIVERSITY OF MANITOBA

204 474 9069

[Harold.Wallbridge@umanitoba.ca](mailto:Harold.Wallbridge@umanitoba.ca)

**AREAS OF EXPERTISE:** Psychodynamic therapy and supervision, psychological assessment and diagnosis, projective techniques.

**CURRENT RESEARCH INTERESTS:** As the Director of the Psychological Services Centre, which is the on-site training clinic for the Clinical Psychology Program, my primary roles are administrative and supervisory. I see my own patients, supervise clinical practicum, and coordinate and advise students about their subsequent external clinical practicum. I also routinely teach certain graduate courses. Please note that I am not able to admit graduate students to the Clinical Training Program because I have an administrative (non-academic) appointment with the Department of Psychology.

## DEVELOPMENTAL PSYCHOLOGY

Developmental psychology is a cross-disciplinary research area with the goal of understanding how we as humans grow and change over time. It bridges across diverse fields of inquiry, such as cognition, linguistics, social psychology, neuroscience, and health psychology. Faculty in our area study an extensive scope of topics across both special populations and typically developing individuals, like the development of language and communication, environmental and situational factors influencing development, and cross-cultural differences in children's experiences. We also employ diverse methodologies, including in-lab measurements of infants' perceptual responses, children's behaviour in play-based tasks, electrophysiological brain and cardiovascular responses in children and their caregivers, biomarkers of hormonal and immune function, surveys, and analysis of audio recordings of young children's everyday experiences. Graduates from our program are prepared for a wide range of careers in government, schools, business, and universities. Interested prospective graduate students should email individual developmental area faculty members regarding their plans for accepting new graduate students for the next admissions cycle.

### AREA FACULTY

**MELANIE GLENWRIGHT**, PHD, UNIVERSITY OF CALGARY

204 474 9726

[Melanie.Glenwright@umanitoba.ca](mailto:Melanie.Glenwright@umanitoba.ca)

**AREAS OF EXPERTISE:** Communication Comprehension in Children, Adolescents, and Adults

**CURRENT RESEARCH PROJECTS:** I study how people learn to appreciate conversational speech acts including sarcasm, gossip, teasing, and humour. I'm interested understanding how factors like development, social cues, and culture influence our appreciation of these speech acts. I will be accepting a new developmental graduate student in the upcoming year.

**RYAN J. GIULIANO**, PHD, UNIVERSITY OF OREGON

204 474 9276

[Ryan.Giuliano@umanitoba.ca](mailto:Ryan.Giuliano@umanitoba.ca)

<https://heartsandmindslab.com/>

**AREAS OF EXPERTISE:** Developmental Cognitive Neuroscience, Psychophysiology, Executive Function, Selective Attention, Working Memory, Biomarkers of Acute and Chronic Stress

**CURRENT RESEARCH INTERESTS:** My NSERC and SSHRC funded research program is currently focused on studies of acute stress delivered in the laboratory or over online video chat platforms, adapted for children as young as three years of age and on up to adults. Our in-laboratory work involves concurrent measurement of neural (EEG) and cardiovascular function (ECG) during a variety of contexts and cognitive measures. Our work online uses adaptations of many of the same tasks and includes more novel physiological measures such as smartphone-based photoplethysmography (PPG) and wearable tech devices. The ultimate aim of this work is to better understand individual differences in the neurophysiological mechanisms implicated in the experience of stress across the lifespan. I will consider applications for graduate students in my lab this coming year.

**SHAYLENE NANCEKIVELL**, PHD, UNIVERSITY OF WATERLOO

204 474 8248

[Shaylene.Nancekivell@umanitoba.ca](mailto:Shaylene.Nancekivell@umanitoba.ca)

[www.youngmindsresearch.com](http://www.youngmindsresearch.com)

**AREAS OF EXPERTISE:** Social-Cognitive Development, Learning Sciences, Early and Middle Childhood, Intuitive Theories, Ownership, Learning Myths, Child-Technology Interactions

**CURRENT RESEARCH PROJECTS:** My research program aims to understand the development of intuitive theories including how young children use these theories to navigate the social world. How do children explain and predict others' behavior, actions, and reactions? How are children's intuitions about how the world works similar to or different from adults' intuitions? I use multidisciplinary methods such as forced-choice paradigms, open-ended responses, protests, and naturalistic observations to examine these questions. My main line of work focuses

on understanding how theories of ownership develop. Namely, how do children acquire a sense of mine and yours? Most recently, I have asked how early beliefs about ownership shape people's interactions with technology (e.g., Does Alexa own my data?). My work on ownership focuses predominantly on early and middle childhood as these are the ages at which conceptual representations are rapidly forming, and when children begin to develop more nuanced understandings of others' behavior and minds. I also have a secondary line of work that examines common beliefs and misconceptions about learning. This work has mainly focused on undergraduate students and teachers. My work has been funded by NSERC and SSHRC. It was also selected for funding by NSF in the United States. I am considering applications for graduate students in all aspects of my research.

research community that works toward positive solutions to the so-called "replication crisis". In our first initiative, we studied variation in infants' preference for infant-directed speech across methodologies, age, and linguistic community, with a sample of approximately 70 laboratories and over 2000 infant participants. I currently receive funding from diverse sources including SSHRC, NSERC, and the NIH. I am considering applications for graduate students in all aspects of my research.

**MELANIE SODERSTROM**, PHD, JOHNS HOPKINS  
UNIVERSITY

204 474 8777

[M.Soderstrom@umanitoba.ca](mailto:M.Soderstrom@umanitoba.ca)

<http://www.babylanguagelab.ca/>

**AREAS OF EXPERTISE:** Infant Speech Perception, Early Language Acquisition, Cross-cultural and situational differences in early language experiences, Collaborative and Open Science

**CURRENT RESEARCH PROJECTS:** I examine the perceptual capabilities of infants and the characteristics of their natural language environment, and how these influence early language development. I am particularly interested in how situational factors (e.g. cultural characteristics of the language community, parent age, child hearing status, childcare setting) influence children's language experiences, and the role of infant-directed speech ("babytalk") in these experiences.

I am currently leading a consortium of child language researchers and machine learning experts (the ACLEW project) in developing new automated methods for analyzing real world recordings of children's early language experiences and a flexible annotation system to allow direct comparisons of language experiences across culturally diverse audio samples.

I am also an organizing researcher on the ManyBabies project, a largescale collaborative effort within the infant

## QUANTITATIVE

Members of the Quantitative Psychology group have expertise in a broad range of topics in measurement, research design, and statistical analysis. Topics such as classical and robust estimation and testing, structural equation modeling, multilevel and hierarchical methodology, meta-analysis methodology, parametric and nonparametric regression analyses and diagnostic procedures, analyses of repeated or longitudinal data, and simultaneous statistical inference are of particular research interest. Training in this area includes practical applications as well as theoretical analysis.

.....

### AREA FACULTY

**JOANNE C. KESELMAN**, PHD, UNIVERSITY OF MANITOBA

204 474 9444

[Joanne.Keselman@umanitoba.ca](mailto:Joanne.Keselman@umanitoba.ca)

**AREAS OF EXPERTISE:** Quantitative Methods; Applied Statistical Analysis

**CURRENT RESEARCH PROJECTS:** Data-analytic strategies for repeated measures designs; Meta-analysis.

**SUNMEE KIM**, PHD, MCGILL UNIVERSITY

204 474 8268

[Sunmee.Kim@umanitoba.ca](mailto:Sunmee.Kim@umanitoba.ca)

**AREAS OF EXPERTISE:** Interpretable data reduction in prediction modeling, Dealing with heterogeneity in data by clustering or recursive partitioning, Component-based structural equation modeling, Analysis of clustered or correlated data using generalized estimating equations and multilevel models, Bootstrap smoothing, Regularization techniques

**CURRENT RESEARCH PROJECTS:** My interests are broadly related to the development of novel statistical techniques to alleviate the assumptions or restrictions of current quantitative methods in the fields of Psychology and Behavioral Data Science. I am particularly interested in component-based data reduction for regression problems, various methods for analyzing

multiple response variables considering their underlying interdependent pattern, and the application of statistical and machine learning techniques to a variety of research questions in the social and behavioral sciences. I have explored various applications of these methods for studying substance use, rare genetic variants, Canadians' political opinions, and changes in health status, psychological well-being, and cognitive faculties associated with aging. I am accepting graduate student applications for the MA and PhD program in psychology for the next Academic year. Experience in computer programming and/or coursework in math/statistics is desirable. I am also open to potential collaborations from researchers in related fields.

**JOHNSON C. H. LI**, PHD, UNIVERSITY OF ALBERTA

204 318 2923

[Johnson.Li@umanitoba.ca](mailto:Johnson.Li@umanitoba.ca)

**AREAS OF EXPERTISE:** Quantitative psychology, robust analytic techniques, meta-analysis, correction for study artifacts, resampling techniques, latent-variable modeling

**CURRENT RESEARCH PROJECTS:** Being a quantitative psychologist, I am particularly interested in evaluating the behavior of existing statistical analyses under different data conditions (e.g., non-normal data in a clinical-psychology sample, range-restricted data in an industrial/organizational sample), developing new quantitative methods (e.g., new model specifications in latent-variable modeling) for increasingly sophisticated models in psychological research, and applying different quantitative methods in real-world research. Specifically, my first line of research involves proposing and evaluating new bias-correction procedures for study artifacts (e.g., restriction of range, non-normality) in reliability and validity coefficients in single and meta-analytic studies. Secondly, I am interested in improving the accuracy of latent-variable models—including item response models, confirmatory factor models and structural equation models—when they are subject to different data conditions such as hierarchical grouping and restriction of range. My third line of research lies in applying existing and new quantitative methods in practice. I have been engaged in evaluating the psychometric properties of existing scales (e.g., Spence's Children Anxiety Scale), and developing

psychometric instruments in psychology (e.g., early detection of children with autism spectrum disorder) and education (e.g., items for university students' evaluation of teaching).

**WAN WANG**, PHD, WILLFRID LAURIER UNIVERSITY

204 474 9276

[Wan.Wang@umanitoba.ca](mailto:Wan.Wang@umanitoba.ca)

**AREAS OF EXPERTISE:** Teaching of quantitative research methods and statistics; Moderation and Mediation; Self and Identity; Climate Change Communication

**CURRENT RESEARCH PROJECTS:** My research interests involve applying advanced quantitative methods to addressing pressing social issues. One ongoing line of my research investigates psychological barriers to pro-environmental actions and seeks to identify effective climate change communication messages. My second line of research focuses on how personality and self-related processes contribute to dismissive and aggressive reactions to differing opinions. I am also interested in scholarly teaching and learning research on promoting critical thinking, open science, and statistical literacy. I am considering admitting Honours thesis students and one Master's student for the next academic year..

## SCHOOL PSYCHOLOGY

We offer two streams of training in School Psychology: a two-year non-thesis comprehensive exam based MA degree and a three-year thesis stream. In both streams our objective is to provide excellent training in the principles and practices of school psychology, preparing students to deliver psychological services within the school community context. This includes intensive training in various theoretical perspectives (e.g., biological, cognitive, social, etc.) regarding the development of positive mental well-being and the aetiology and treatment of psychological disorders, significant expert training in assessment and measurement and the implementation and evaluation of prevention and treatment programs and course content focussed on instructional processes and school systems.

Please refer to Appendix 3 for further information.

### AREA FACULTY

**RICHARD KRUK**, PHD, UNIVERSITY OF TORONTO

204 474 7349

[Richard.Kruk@umanitoba.ca](mailto:Richard.Kruk@umanitoba.ca)

**AREAS OF EXPERTISE:** Reading acquisition, reading difficulty, development of visual, phonological, orthographic, and morphological abilities in children.

**CURRENT RESEARCH INTERESTS:** I study how children's visual and cognitive skills in the early elementary school years can predict later difficulties in reading. I am currently focusing on how early vision and attention abilities influence difficulties in basic reading skill acquisition, and I am examining the roles of phonological, orthographic, morphological knowledge in emerging word recognition and reading comprehension skills.

Relying mainly on longitudinal approaches, I track how the role of early visual processes on early reading changes during the first three years of literacy learning. I am also exploring the importance of morphological awareness, involving basic meaning units in words, as a reciprocal influence in reading acquisition.

**JANINE NEWTON MONTGOMERY**, PHD,  
UNIVERSITY OF SASKATCHEWAN

204 474 8306

[Janine.Montgomery@umanitoba.ca](mailto:Janine.Montgomery@umanitoba.ca)

**AREAS OF EXPERTISE:** Family Systems; Parenting; Attention Deficit Hyperactivity Disorder, Women's Issues in Applied Psychology, Meta-Analysis

**CURRENT RESEARCH INTERESTS:** The overarching theme of my research is that families are systems and family members have a variety of effects on one another. I currently have two areas of interest falling under this umbrella. The first is on the family (including parental) factors associated with child Attention Deficit Hyperactivity Disorder. The second is on clinical applications of attachment theory, as well as parenting more generally. Additionally, I have an interest in women's issues in applied psychology. I often use systematic reviews (including meta-analysis) to help me answer these questions and clarify the effects and relationships between these factors, as well as to identify moderators of the examined relationships. I do not anticipate accepting graduate students for admission in the next academic year.

## SOCIAL & PERSONALITY

Social and personality psychology seeks to understand how people think about, influence, and relate to one another, and how they strive to satisfy personal needs and goals in the wider world.

Training in social and personality psychology at the advanced undergraduate, M.A., and Ph.D. levels emphasizes critical thinking and the scientific process from idea generation to disseminating knowledge. Such training occurs through a wide range of seminars, supervised research projects and thesis work, and regular research meetings of the social and personality faculty and graduate students, resulting in academic and applied careers. Students are encouraged to build their research portfolio by presenting at conferences, writing manuscripts for potential publication, and working on multiple lines of research.

Studying in the social and personality psychology area offers an opportunity to work with research experts on:

- Close relationships (e.g., romantic, friendship, relationship initiation)
- Health-related self-perceptions and behavior
- Motivation and emotion in achievement and health domains
- Individual differences (e.g., personal control, self-esteem, self-compassion, gender)
- Intergroup relations and social justice (e.g., reconciliation, prejudice, discrimination, social change, intergroup interaction)
- Scale construction
- Social perception (e.g., attributions, biases, empathy, perspective taking, concerns with social evaluation)

## AREA FACULTY

**DAN BAILIS**, PHD, PRINCETON UNIVERSITY

204 474 8777

[Dan.Bailis@umanitoba.ca](mailto:Dan.Bailis@umanitoba.ca)

**AREAS OF INTEREST:** Social psychology and health.

**CURRENT RESEARCH INTERESTS:** My research focuses on the personal lifestyle decisions that lead to our health and well-being, and the social and personality factors behind those decisions. My approach is guided by theories in social and personality psychology that address the interplay of action and identity – where identity is examined as a cause, consequence, and sometimes an object to be shielded from our actions and decisions. I have previously applied this approach to topics in the psychology of health and aging, such as self-rated health, physical activity, goal conflict, perceived control, social comparison, and collective self-esteem. I am currently working on several projects to investigate how personal decision-making is related to individual differences in self-compassion. All of these projects build upon our current understanding of how self-compassion relates to mental processing of past failures and mistakes, and are meant to pivot toward a new understanding of how self-compassion relates to mental processing of the future – i.e., the prospects of gains and losses that have not happened yet – in domains such as consumer behaviour, gambling, changing and giving up lifestyle behaviours, and sport injury rehabilitation. I look forward to admitting new graduate students in the Social and Personality Program Area this year.

**JESSICA J. CAMERON**, PHD, UNIVERSITY OF WATERLOO

204 474 7490

[Jessica.Cameron@umanitoba.ca](mailto:Jessica.Cameron@umanitoba.ca)

[home.cc.umanitoba.ca/~cameron2](http://home.cc.umanitoba.ca/~cameron2)

**AREAS OF EXPERTISE:** Romantic Relationships, Insecurity, Self-esteem, and Gender

**CURRENT RESEARCH INTERESTS:**

I have three main research interests that inspire the research undertaken in my lab. First, I focus on romantic relationships with an emphasis on relationship initiation. Much of this work intersects with my second and third research interests and thus, focuses on how insecurity and

gender influence how romantic relationships begin. Recently, our research on the friends-to-lovers pathway has investigated how romantic desire can form within a platonic friendship. Second, I am keenly interested in the behavioural, perceptual, and emotional consequences of insecurity (e.g., low self-esteem; insecure attachment). In this line of research, I focus on investigating the consequences (and perhaps the sources) of insecurity in close relationships. Within this broad research area, I have also taken a special interest in social stereotypes about being insecure and the measurement of insecurity. Third, I am interested in issues surrounding gender diversity, gender roles and attitudes, and women's unique experiences. Within this line of research, I focus on the use and creation of inclusive gender demographic measures, and the influence of gender roles and sexism during romantic relationship initiation. I look forward to accepting new graduate students into our program for the next academic year.

. Second, I am interested in issues surrounding gender diversity, gender roles and attitudes, and women's unique experiences. Within this line of research, I focus on the use and creation of inclusive gender demographic measures, and the influence of gender roles and sexism during romantic relationship initiation. **NICHOLAS EVANS**, PHD, UNIVERSITY OF TEXAS AT EL PASO

204 474 8257

[Nicholas.Evans@umanitoba.ca](mailto:Nicholas.Evans@umanitoba.ca)

<https://nicholasdevans.weebly.com/>

**AREAS OF EXPERTISE** Personality, Social Cognition, Emotion, Self and Identity, Interpersonal and Romantic Relationships

**CURRENT RESEARCH INTERESTS:** My research primarily lies at the intersection of personality, social psychology, and social cognition, and often focuses on interpersonal relationships. Using a variety of methods from these domains, my work explores the interplay between different emotional, cognitive, and behavioral processes and how people perceive and make sense of their social worlds. My major lines of research include the cognitive components and interpersonal benefits of nostalgia and metaphor use. For example, I am interested in investigating the role mental imagery plays in experiencing nostalgia and using metaphors in our everyday language. I am also investigating how both nostalgia and metaphor use can

serve interpersonal benefits, particularly within romantic relationships. Finally, I have a growing line of research in the psychological and interpersonal processes involved in intellectual humility and science denialism. I plan to accept graduate students in the Social & Personality area for the next academic year.

**DANIELLE GAUCHER**, PHD, UNIVERSITY OF WATERLOO

204 474 7840

[Danielle.Gaucher@umanitoba.ca](mailto:Danielle.Gaucher@umanitoba.ca)

**AREAS OF EXPERTISE:** Social Change, Intergroup Relations, Social Justice, Political Psychology, Social Activism, Immigration, Gender

**CURRENT RESEARCH INTERESTS:** My goal is to advance theory and better understand the social-psychological barriers to social change, with the ultimate goal of discovering how to best encourage a wide range of prosocial behaviours and social arrangements. To accomplish these aims, the research conducted in the lab is psychologically informed, quantitatively grounded, and broadly disseminated. Our research attempts to answer questions such as: What are the barriers to social change? How do these barriers manifest at the individual and institutional levels? And how can prosocial behaviour and social arrangements be encouraged? I will be admitting graduate and undergraduate honours students for the next academic year.

**RAYMOND P. PERRY, DISTINGUISHED PROFESSOR**, PHD, UNIVERSITY OF CALGARY

204 474 7838

[Ray.Perry@umanitoba.ca](mailto:Ray.Perry@umanitoba.ca)

**AREAS OF EXPERTISE:** Social Cognition; Applied Social Psychology; Instructional Psychology; Prejudice and Discrimination

**CURRENT RESEARCH INTERESTS:** My research interests lie primarily within the social cognition domain, as exemplified by Weiner's Attribution Theory, Covington's Self-Worth Theory, Seligman's Learned Helplessness Theory, etc. Within this general orientation, three major topics have been emphasized. One line of research has focused on motivation and performance in achievement settings. Of particular interest is the identification of academic markers that make some people failure-prone

and others mastery-oriented. Related to this is the development of intervention techniques designed to assist high-risk individuals to function at optimal capacity. A second line of research has examined the role of perceived personal control in health and aging in diverse populations. Utilizing a variety of control theory perspectives, it is assumed that perceived control has a strong, positive influence on health and successful aging. Finally, some research has focused on the analysis of prejudice and discrimination in different social settings.

**KATHERINE STARZYK**, PHD, QUEEN'S UNIVERSITY  
204 474 8254  
[Katherine.Starzyk@umanitoba.ca](mailto:Katherine.Starzyk@umanitoba.ca)

**AREAS OF EXPERTISE:** Reconciliation, psychometrics, solidarity, social justice, individual and social causes of collective action, intergroup relations

**CURRENT RESEARCH INTERESTS:** In collaboration with an interdisciplinary team, I'm currently focusing on the Canadian Reconciliation Barometer project (<https://reconciliationbarometer.ca>), one goal of which is to track progress toward reconciliation between Indigenous and non-Indigenous peoples in Canada. Broadly speaking, my research addresses "social justice" issues. Frequently working with multidisciplinary teams of collaborators, I aim to understand when people are likely to become concerned about current or past human rights issues as well as how various "frames" of such issues affect intergroup relations—with the goal of making both theoretical and applied contributions. Aside from the usual methods (i.e., correlational, experimental, and survey) and analytic approaches in Psychology (i.e., quantitative, including advanced methods such as structural equation modeling and meta-analysis), I also value working with large data sets from public polls, conducting focus groups and interviews, and completing qualitative and archival analyses. Students working with me tend to focus on related issues. Please see <http://katherinestarzyk.com> for more information. I'm open to supervising students in Social and Personality (Department of Psychology; I'm a member of this program and prefer to admit students to this program) and Clinical Psychology (Department of Psychology; I can only admit to this program in some years). Though eligible to supervise students in the Master in Human Rights (Faculty of Law) and Peace and Conflict Studies (Arthur V. Mauro Centre

for Peace and Justice) programs, I'm less likely to do that now. Interested students should \*ideally\* contact me early (before September) and apply for [Social Sciences and Humanities Research Council Canada](#) funding.

**JACQUIE VORAUER**, PHD, UNIVERSITY OF WATERLOO  
204 474 8250  
[Jacquie.Vorauer@umanitoba.ca](mailto:Jacquie.Vorauer@umanitoba.ca)

**AREAS OF EXPERTISE:** Social Perception; Intergroup Relations; Empathy and Perspective-Taking; Power

**CURRENT RESEARCH INTERESTS:** I have a long-standing interest in people's beliefs about how they are viewed by others and in how concerns about evaluation affect interpersonal and intergroup interaction. Recent projects have focused on how individuals' reactions to anger-inducing events are enhanced by their imaginings of close others' empathy for them, how different ways of framing discussions of intergroup policies affect marginalized group members' power outcomes, and how the self-observation (being able to see oneself) often involved in online communication platforms affects interaction dynamics and outcomes. I am seeking to admit new graduate students in the Social and Personality Area this year.

## APPENDICES

---

Appendix 1 Applied Behaviour Analysis Program

Appendix 2 Clinical Psychology Program

Appendix 3 School Psychology Program

## APPLIED BEHAVIOUR ANALYSIS

Applied Behaviour Analysis (ABA) involves the systematic application of learning principles and techniques to assess and improve individuals' covert and overt behaviours in order to help them function more fully in society. Training in the experimental analysis of behaviour (basic research on behaviour) is also provided. The Department of Psychology offers research and applied training at both the MA and PhD levels in ABA. Students have the opportunity to receive supervised training in the practice of ABA with varied clientele, and especially with persons with developmental disabilities and/or autism.

The Association for Behavior Analysis International has verified the following courses toward the coursework requirements for eligibility to take the Board Certified Behavior Analyst®. Applicants will need to meet additional requirements before they can be deemed eligible to take the examination.

- PSYC 7150 Readings in autism spectrum disorders
- PSYC 7280 History and systems of psychology
- PSYC 7300 Applied behaviour analysis in developmental disabilities
- PSYC 7362 Ethics and professional issues in applied behaviour analysis and psychology
- PSYC 7570 Skinner's writings
- PSYC 8212 Verbal behaviour
- PSYC 8240 Seminar in behaviour modification
- PSYC 8260 Individual organism research methodology
- PSYC 8270 Seminar in basic operant research
- PSYC 8300 Behavioural assessment

The Behavior Analyst Certification Board, Inc.® has approved the following intensive practica toward the experience requirements for eligibility to take the Board Certified Behavior Analyst Examination. Applicants will need to accrue additional experience to qualify. Intensive Practica are a BACB-approved experience category only until December 31, 2021. For information about supervised fieldwork experiences that meet BACB eligibility requirements after that date, please contact the ABA area chair, Dr. Toby Martin.

- PSYC 7220 Autism practicum 1
- PSYC 7230 Autism practicum 2
- PSYC 7240 Developmental disabilities practicum 1
- PSYC 7250 Developmental disabilities practicum 2

Students must be enrolled in the psychology graduate program at the University of Manitoba in order to take these courses and practica. Students must also meet additional requirements for the Master's and PhD degrees as required by the Department of Psychology and University of Manitoba (e.g., quantitative and ancillary courses, research thesis, and candidacy examination).

In addition, a student seeking registration as a psychologist must meet coursework requirements in the following content areas (e.g., biological bases, cognitive-affective bases, social bases, individual bases, and history and foundations of behaviour), and accrue appropriate supervised experience to be eligible to take the Examination for Professional Practice of Psychology.

APPENDIX 2 . . . . .

## CLINICAL PSYCHOLOGY

This appendix includes information about our program's accreditation status, admissions to the Clinical Program, the clinical training sequence and curriculum, and data on student admissions and outcomes. Other primary sources of information about the program include the Clinical Program homepage on the Department of Psychology website, and the Clinical Program Handbook (which is available online).

For inquiries about the program please contact:

Email: [Kristin.Reynolds@umanitoba.ca](mailto:Kristin.Reynolds@umanitoba.ca)

### ACCREDITATION STATUS

The University of Manitoba Clinical Psychology Training Program is accredited by the Canadian Psychological Association (CPA) for a 6-year term until its next site visit in 2028-2029. Inquiries regarding the program's accreditation status can be directed to:

CPA Accreditation Office  
Dr. Stewart Madon, Registrar, Accreditation  
141 Laurier Avenue West, Suite 702  
Ottawa, Ontario K1P 5J3  
Phone: 613 237 2144 x 328 or 1 888 472 0657 x 328  
Email: [accreditation@cpa.ca](mailto:accreditation@cpa.ca)

**CPA General Contact Info**

Toll free: 1-888-472-0657  
Email: [cpa@cpa.ca](mailto:cpa@cpa.ca)

### ADMISSION INFORMATION

In addition to the general requirements outlined in Section 8 concerning admission for all graduate students, it is important to note that clinical students can be admitted and advised by faculty members in any area of our department, as well as those doing psychological research outside of our department (who must have

existing or new adjunct appointments to the Department of Psychology). However, core members of the clinical area have priority over non-clinical members of our department and adjuncts concerning admissions. Applicants are strongly encouraged to contact, prior to applying, potential advisors to determine whether they will be admitting new students. The match of research interests between advisor and student is a critical aspect of the admission process.

Each year, new admissions to the Program are determined by Clinical Psychology Training Program faculty in accordance with policies of the Department of Psychology. Applications are reviewed by the Clinical Admissions Committee, which consists of the Director of Clinical Training and other clinical faculty members. The Clinical Admissions Committee initially reviews all applicants based on their Grade Point Average (GPA) and their research fit with potential research advisors. Given our program's commitment to equity, diversity, and inclusion, any diversity information that applicants wish to share will also be taken into consideration. Based on this initial review of applications, each applicant will receive a maximum of 60 **stage one** points, with students who receive scores of 40+ moving to a **stage two** review. During the **second stage** of the admissions process the Clinical Admissions Committee then assigns up to a maximum of 40 additional points based on letters of recommendation, statement of interest, research & professional experience, and a clinical suitability interview (that can be completed in-person, by phone, or online). Applicants who are deemed suitable for admission, and who have the highest number of points from both stages of the admissions process, are then offered admission or wait-listed for admission to the Clinical Psychology Training Program.

Admission to the Clinical Psychology Training Program is highly competitive (see admissions data on our Clinical Psychology Program website:

<https://umanitoba.ca/arts/psychology/graduate-student-resources/clinical-psychology>). There are usually 50-80 applicants for an average of 6-9 new admissions per year. Successful applicants usually come from the top 10 to 20 students in our two-stage ranking process. Students admitted to our program typically have GPAs above 4.0 (on a 4.5 scale) in their last 20 full courses (or their equivalent), strong letters of recommendation, and

both research and clinical experience. Our program is committed to increasing the number of students from diverse backgrounds that we admit and train, such that any diversity information that applicants wish to share as part of their letter of intent will be viewed favourably and treated with confidence. . Students recommended for admission to the Clinical Psychology Training Program will receive an email offer from the Faculty of Graduate Studies. Following receipt of the offer, all students must indicate in writing their acceptance of the offer to the Psychology Graduate Office by no later than April 15. Acceptance is provisional until students have submitted a Criminal Record Check, Adult Abuse Registry Check, and Child Abuse Registry Check deemed to be satisfactory by the Head (or designate) in consultation with the Director of Clinical Training. These checks must be submitted to the Psychology Graduate Office following admission and prior to registration in the Clinical Program. Although we are a doctoral training program and it is generally expected that MA students will normally transition to the PhD program, internal MA students transitioning from the MA program to the PhD program must formally apply for admission to the PhD program by May 1 for September admission and October 1 for January admission to the PhD program.

Our clinical training program also has a special admission procedure for students who identify as coming from marginalized backgrounds. In addition to this broad commitment to greater diversity among our student body, the program strives to ensure that at least two students who identify as Indigenous are admitted each year so that our program can better meet the needs of Indigenous communities.

Our current students are a heterogeneous group of individuals from across Canada and a number of foreign countries. They range in age from their early twenties into their forties. Once admitted, over 90% of all clinical students successfully complete their Ph.D. degree at the University of Manitoba.

### Transfers

Nonclinical graduate students in the Department who wish to be admitted into the Program must go through the same application and admission procedures as any external applicant.

### CLINICAL TRAINING SEQUENCE

Clinical psychology training at the University of Manitoba includes a carefully sequenced series of courses and training experiences that are outlined in this section of the Graduate Studies in Psychology brochure. While the Department does not offer terminal M.A. level training in clinical psychology, the required curriculum is outlined for M.A. level students to (a) provide important preparation for later clinical work, (b) satisfy prerequisites for doctoral level courses, and (c) fulfill the requirements at the Master's level. In other words, pre-doctoral courses provide preparatory training leading to an M.A. degree in Psychology, whereas the entire educational program is expected to culminate in the Ph.D. degree. Thus, the education and training program outlined in this section of the brochure represents the entire Clinical Psychology Training Program at the University of Manitoba. The normal expected time for completion of the Ph.D. (including a pre-doctoral internship year) is **six** years for students entering the Program with an Honours B.A. degree and **four** years for students entering with a clinical psychology Master's degree.

Practicum experience is obtained through supervised clinical work at the Psychological Service Centre and at other approved settings. Internships as well as other supervised clinical experience can be obtained in various facilities and institutions in Canada (and, in rare cases, the United States). It is our expectation that clinical students will apply broadly across Canada for internships that are accredited by the Canadian Psychological Association.

**CLINICAL TRAINING PROGRAM OF STUDY <sup>1</sup>**  
(LAST MODIFIED APRIL 2019)

<b>M.A.</b>	<b>FALL</b>	<b>WINTER</b>	<b>SUMMER</b>
MA 1 Year 1	Quantitative Methods in Psychology 1 <b>PSYC 7200 (3)</b>	Quantitative Methods in Psychology 2 <b>PSYC 7210 (3)</b>	MA Thesis Oral Proposal

	Internship <b>PSYC 7980 (0)</b>		

**NOTES:**

- <sup>1</sup> Students may take an optional elective course at any point in their graduate program under the advisement of their advisor and/or advisory committee.
- <sup>2</sup> Although this course can be taken during any one of the first four terms of full-time study in the M.A. program (including the summer term), we recommend that students complete it in this term so that they can propose, apply for ethics approval, and begin collecting data in the summer of the MA1 year.
- <sup>3</sup> If a student is taking only one of *Psychopathology and Diagnosis (PSYC 7290)* or *Child/Youth Psychopathology (PSYC 7080)*, the student can audit the other. If the student is taking both, they are able to take one in the Fall MA2 & the other later (as early as possible, preferably in the fall of PhD 1). Decisions about whether to take one course or both should be made with the advisor and/or advisory committee.
- <sup>4</sup> Students can take a 3-credit graduate course to meet this core content area or apply to the DCT to have it waived in one of the following three ways: (1) students have taken 6 credits of senior undergraduate course work meeting this requirement, (2) students have taken 3 credits of senior undergraduate course work and scored at or above a scaled score of 65 on the relevant (Biological, Cognitive, or Social) subscale from the Psychology GRE test, or (3) students have a candidacy exam question that meets this requirement that is approved by their thesis committee. The History core content area can be met with a 3-credit senior undergraduate course. If this course is used to meet the Department's MA or PhD Ancillary requirement, waiving it will require that students take another ancillary course.
- <sup>5</sup> Three senior practica, also known as specialty practica, are required, for a total of 6 required practica. The phrase "Senior Practicum" therefore refers to the timing of when senior practica are completed and the fact that students, with approval from the program and PSC directors, may take more than the required six practica (see bullet #7). Senior practica are typically completed in the community, but may also be completed with a specific focus, supervised by clinical faculty at the PSC.
- <sup>6</sup> Although this course can be taken during any one of the first eight terms of full-time study in the PhD program (including the summer session), we recommend that students complete it this term so that they have a full year to work on dissertation research before applying for internship.
- <sup>7</sup> Each practicum beyond the 6<sup>th</sup> requires approval from the DCT and Director of the PSC. Approval will be contingent upon the student having demonstrated satisfactory progress through the program. See the Request to Apply for Optional Practicum form in the Appendix of the Clinical Program Handbook.
- <sup>8</sup> PhD oral proposal must have received either an outright or provisional pass by May 15<sup>th</sup> of the year internship applications are due. If the pass is provisional, any required revisions to the written proposal must be fully completed and approved by the Department of Psychology in order for the student to receive approval to apply for internship. Our program prefers students to have defended their proposal well before this date before applying for internship (see bullet point #6).

*Note A:* Number of credit hours is shown in parentheses

*Note B:* This table presents an ideal sequence through the clinical program. Some modifications to this sequence may be necessary because of when courses are offered or because of student needs.

*Note C:* CPA requires coverage in 5 core content areas of general psychology through: (a) passing suitable evaluations in each area, or (b) completing 3 credits of graduate or 6 credits of senior undergraduate courses in each area. The 5 content areas are:

- (1) Biological bases of behaviour (e.g. neuropsychology, psychopharmacology, physiological psychology, comparative psychology),
- (2) Cognitive-affective bases of behaviour (e.g., learning, sensation, perception, cognition, thinking, motivation, emotion),
- (3) Social bases of behaviour (e.g., social psychology; cultural, ethnic, and group processes; sex roles; organizational and systems theory),
- (4) Individual behaviour (e.g., personality theory, human development, individual differences, abnormal psychology),
- (5) Historical and scientific foundations of general psychology.

Our program normally fulfills core content area 1 via PSYC 8230 (Clinical Neuropsychology), core content area 2 through the Cognitive-affective elective in PhD Year 3, core content area 3 through PSYC 7082 (Intervening with Children & Social Systems in PhD Year 1), core content area 4 through PSYC 7290 and/or 7080 (Child and Adult Psychopathology courses), and core content area 5 through PSYC 7280 (History and Systems of Psychology). For exceptions to this see footnote #4

## Clinical Statistics

( [https://www.umanitoba.ca/arts/sites/arts/files/2022-09/Clinical-Program-Statistics-2022\\_3.pdf](https://www.umanitoba.ca/arts/sites/arts/files/2022-09/Clinical-Program-Statistics-2022_3.pdf) )

APPENDIX 3 . . . . .

## SCHOOL PSYCHOLOGY

### PROGRAM OVERVIEW

We offer two streams of training in School Psychology: 1) a two-year non-thesis comprehensive exam based MA degree in School Psychology that is designed to ready students for employment after two years of intense preparation and 2) a three-year thesis stream that includes additional training in research design and data analysis.

Students applying to the program will indicate their preference for thesis or non-thesis track. The application, interview, and acceptance process is the same for both tracks, with the exception that a student applying to the thesis track must have a faculty member agree to serve as research advisor before they are accepted. The advisor may be in any departmental area as long as their research is compatible with School Psychology. Students in the thesis track will have one opportunity to switch into the non-thesis track at the end of Year One. A switch of this kind must be approved by the School Psychology faculty and the Associate Head (Graduate). Students who switch to the non-thesis track will be required to complete all course requirements for the non-thesis option including the comprehensive examinations in year one and two. Students in the non-thesis track will not be permitted to switch to the thesis track unless they reapply to the program.

In both streams our objective is to provide excellent training in the principles and practices of school psychology, preparing students to deliver psychological services within the school community context. This includes intensive training in various theoretical perspectives (e.g., biological, cognitive, social, etc.) regarding the development of positive mental well-being and the aetiology and treatment of psychological disorders. It also includes significant expert training in assessment and measurement and the implementation and evaluation of prevention and treatment programs. It includes course content focussed on instructional processes and school systems. We provide this by partnering with the Faculty of Education and by the inclusion, in core courses, of specific modules focussed on topics specific to the classroom experience.

A particular strength of our program is the collaboration in training with working School-based Clinicians. The curriculum includes two supervised practica for the development of skills in assessment and intervention, and other School Psychology activities. By providing early and continuing placements in real-world, applied settings we provide training that allows students very

early on to apply their skills in practical and meaningful activities. Feedback from employers indicates that our students are well equipped to begin their careers with confidence and capacity, and to grow with the benefit of continuing education. Our focus is on helping students become familiar with the best practices of data-based decision making and evidence-based interventions.

The program is organized to progress from the general to the specialized, the basic to the complex, and the theoretical to the practical. The program is designed to meet the specific requirements for registration and licensing for school psychologists in Manitoba. As well, the program is designed to develop the necessary competencies listed by the National Association of School Psychologists. In addition, the program incorporates training in areas identified by the Canadian Psychological Association Mutual Recognition Agreement. This common set of competencies is required for training programs and licensing requirements across the country. This training ensures that our program matches or exceeds the requirements of other programs in Canada and facilitates licensing of our graduates in other jurisdictions.

We pay special attention to the diversity that characterizes the student population in Manitoba. For example, courses contain components that address issues such as unique aspects of living and learning in rural and urban environments, ethnic and cultural diversity (especially the needs of Indigenous students), and the special needs of students who have physical, cognitive, or emotional/behavioural disorders.

For inquiries about the program please contact:

Janine Newton-Montgomery, Ph.D.

### ADMISSION REQUIREMENTS

The admissions criteria and process are the same as those for the other graduate programs in the Department of Psychology with the exception that non-thesis stream students are not required to identify a potential advisor when applying. All students are required to submit a Criminal Record Check and a Child Abuse Registry Check upon admission to and prior to registering in the program.

In recent years new admissions have had an average GPA of 4.12 (on a 4.5 scale) in their last 20 full courses (or their equivalent) and average *GRE*® General Test Scores of: Verbal 155, Quantitative 150 and Analytical Writing 4.1.

A "special admissions" process allows Indigenous and Métis students who meet the minimal requirements set by

the Faculty of Graduate Studies and the Psychology Department to be eligible for admission in a process separate from the general competition. We anticipate admitting up to two students per year in this category, but the actual numbers will vary depending on applications.

Our program attracts students who:

- a. have very strong academic backgrounds
- b. have excellent written and oral communication skills
- c. have excellent social and interpersonal skills
- d. have a strong interest in working with children and

adolescents and who understand the value of the profession of school psychology as an institutional practice.

Fee information is available under the Masters Programs with Special Fees at:
