2020 Research Report

PREPARED BY
THE DEPARTMENT OF PSYCHIATRY

University of Manitoba
We are pleased to present the 2020 Research Report for the Department of Psychiatry. The year saw continued growth in academic pursuits within the Department, across the realms of research, quality improvement, and program evaluation. The onset of the pandemic introduced provincial and national grant competitions specific to COVID-19 projects, and our Department members were successful in obtaining several of these competitive awards.

Investigators within our Department were involved in 49 active peer-reviewed grants in 2020, amounting to over $21 million in total funding. Half of these grants featured Department researchers as co-investigators, emphasizing strong collaborations within and outside of the University of Manitoba.
2020 RESEARCH SUMMARY

The annual number of publications by Department members has risen steadily over the last 20 years, including publications by resident trainees. Papers and reports in the area of population health reflect the significant activities within several epidemiology labs. This is balanced by increases in clinical and health services research from Department investigators over the last few years.

Scholarly activities have been further bolstered by the Department’s commitment to academic development, including the Department of Psychiatry Academic Projects (DPAP) initiative, an internal mechanism to fund Department member projects. We look forward to ongoing success in research and quality improvement over the years to come, and hope that you find this report of interest.
